74 B strong digital presence

Desert Orthopaedic Center's Reputation is one of its strongest signals — but Access & Fit is actively suppressing its AI recommendation capture.

3 KEY FINDINGS

▲ GAP

WHAT WE FOUND

Desert Orthopaedic Center scores 70/100 on Access & Fit — directory listings and NAP consistency have meaningful gaps.

WHY IT MATTERS

Inconsistent name, address, or phone data across directories is a suppression signal that AI tools use to reduce recommendation confidence.

WHAT TO SAY

“Desert Orthopaedic Center appears in multiple directories with conflicting information. AI tools can’t confidently recommend a provider when its own data disagrees with itself.”

Tier: Access & Fit

▲ GAP

WHAT WE FOUND

Desert Orthopaedic Center scores 70/100 on Practitioner Credentials & Clinical Quality — the pillar with the most room to improve.

WHY IT MATTERS

Practitioner Credentials & Clinical Quality carries the highest pillar weight; a low score here suppresses the composite more than any other signal set.

WHAT TO SAY

“The signals AI tools weight most heavily are the ones where Desert Orthopaedic Center has the most room to improve. That’s where we start.”

Tier: Practitioner Credentials & Clinical Quality

✓ STRENGTH

WHAT WE FOUND

Desert Orthopaedic Center’s main listing averages 4.5★ on Google with 1306 reviews across 1 platform(s).

WHY IT MATTERS

Google reputation is a primary input to AI provider recommendation engines — rating and review volume directly influence whether AI tools surface this provider.

WHAT TO SAY

“4.5 stars and 1306 reviews — that’s a strong front door. The work now is making sure AI tools can find it reliably.”

Composite: Reputation

LIVE DEMO PROMPT

Live demo not available for this run — battery not yet executed for this entity.

OBJECTION HANDLING

“Your ratings and reputation look strong already — why do you need this?”

Strong ratings and review counts are table stakes. What separates top AI-recommended providers isn’t just reviews — it’s whether AI tools reliably resolve the entity, link physicians, and attribute the reputation to the right location. Those signals operate below the surface of what looks correct to you.

“We don’t control what AI tools say about us — how is this even fixable?”

AI tools generate responses based on indexed structured data, review signals, and entity resolution — all of which are directly addressable. This isn’t about influencing AI opinions; it’s about ensuring the right signals are indexed so AI tools can accurately represent you.

THE ASK

Next 90-day targets: Physician bios lack confirmed structured markup — Implement Schema.org Physician markup on every surgeon page (name, medicalSpecialty, board certification, education, memberOf → MedicalOrganization). and Board cert only gated-verifiable — Ensure each surgeon's ABMS Certification Matters / ABOS record is current and that Healthgrades/Vitals profiles display certification prominently.. Score held at 74/100 since the prior run (2026-07-14) — maintaining this position is the baseline; the targets below are how we extend it.
