

Mobile Infirmary

Companion to Pulse Diagnostic [41b5ed06-ba23-495a-82e1-a60f275f902c] — Internal use only — Do not distribute to customer

58 C moderate AI visibility

Mobile Infirmary's Access & Fit is one of its strongest signals — but Reputation is actively suppressing its AI recommendation capture.

3 KEY FINDINGS

▲ GAP

WHAT WE FOUND

Mobile Infirmary's primary listing shows 2.7★ across 470 reviews — a reputation score that works against AI recommendation capture.

WHY IT MATTERS

AI provider recommendation engines weight primary listing rating and review volume heavily; a weak front door suppresses confidence and reduces recommendation frequency.

WHAT TO SAY

"2.7 stars and 470 reviews — that's a front door that's working against Mobile Infirmary. AI tools lead with this signal for patient-facing queries."

Composite: Reputation

▲ GAP

WHAT WE FOUND

Mobile Infirmary's Credentials & Recognition tier scores 64/100 — credentials and recognition signals are underrepresented in AI-indexable sources.

WHY IT MATTERS

AI tools verify provider credibility through board certifications, affiliations, and awards. Missing signals here reduce recommendation confidence.

WHAT TO SAY

"Your credentials exist but aren't visible where it counts. We fix the indexing gap so AI tools can verify what you've already earned."

Tier: Credentials & Recognition

✓ STRENGTH

WHAT WE FOUND

Mobile Infirmary scores 78/100 on Access & Fit — directory listings and access signals are consistent and well-indexed.

WHY IT MATTERS

Consistent NAP data and directory coverage are foundational for AI localization — they determine whether AI tools can find and verify a provider's location.

WHAT TO SAY

"Your listings are clean and consistent. That's foundational work that directly enables AI recommendation capture."

Tier: Access & Fit

OBJECTION HANDLING

"Our directory listings look fine — what are you actually fixing?"

Listings appearing correct from your side and AI tools confidently attributing reviews and queries to you are different things. Clean-looking directories can still produce ambiguous entity resolution in AI models — the structured data layer works differently from what's visible to a human reviewer.

"We're already happy with our Google presence — what else is there?"

Google search rank and AI recommendation capture are separate systems. AI tools query structured indexes and entity resolution data, not your Google ranking. A practice can rank well on Google and still be underrepresented when patients ask an AI tool for a recommendation.

THE ASK

To move the needle on AI recommendation capture, start with your website. This addresses the gap in Reputation and creates measurable score lift within 90 days.
